EXPERIENCE

Data Analyst <i>Pitti Immagine</i>	04/2026 – 07/2026 Hybrid - Italy
• Architected B2B Analytics Dashboard: Built a memory-optimized Python/Streamlit pipeline to process 2.2M+ records (1.2GB) within strict RAM constraints. • Engineered Unique-User Tracking: Replaced legacy frameworks with a deduplicated behavioral tracking system for accurate ROI analytics and funnel insights. • Optimized Pipeline Stability: Developed type-aware validation filters to resolve stream-processing bottlenecks and ensure error-free data segmentation. • Automated Cleansing & Lifecycle Metrics: Created a Customer Journey Matrix to map user state transitions and automated the isolation of delivery failures for database optimization.	
Student Ambassador <i>Reply</i>	05/2024 – Present Torino, Italy
Organized and promoted 8+ key initiatives (hackathons, coding challenges, career events) at Politecnico di Torino, driving engagement from over 200+ student participants.	

EDUCATION

MSc in Data Science and Engineering <i>Politecnico di Torino</i> 09/2026 – Present Torino, Italy
BSc in Computer Engineering <i>Politecnico di Torino</i> 2022 – 2026 Torino, Italy
BSc in Computer Engineering (Transferred) <i>Middle East Technical University</i> 2020 – 2022 Ankara, Turkey

Awards

Premio Leonardo 2026 <i>Comitato Leonardo - Italian Quality Committee</i> 14/04/2026
Awarded the Premi Leonardo 2026 by the Comitato Leonardo in recognition of my work and research during my Data Analyst Internship at Pitti Immagine.

PROJECTS

Autonomous UAV Optical Tracking & Prediction System <i>C++, OpenCV, Kalman Filter</i> Engineered a real-time C++ tracking pipeline resilient to dynamic lighting and severe sensor occlusion using CLAHE, HSV masking, and a 4-state Kalman Filter. Architected a SOLID-compliant OOP system, currently integrating YOLO- based deep learning, UDP telemetry, and Apple Metal (MPS) GPU acceleration.
Household Finance Tracker • Designed a relational PostgreSQL database schema to capture, clean, and categorize raw financial transactions. • Created data querying pipelines to extract real-time metrics, and generate monthly spending summaries. • Developed interactive data visualizations mapping time-series trends to uncover user spending patterns.
Multiplayer Italian Quiz Game • Developed a competitive educational platform designed to accelerate vocabulary acquisition through gamified, 10-question rapid-fire matches. • Architected a dual-mode matchmaking system supporting real-time synchronous play against live opponents and asynchronous play against historical "ghost" player data. • Implemented user analytics and progress tracking mechanisms to monitor vocabulary retention and long-term language mastery.

SKILLS

Languages & Tools

C, C++, Python, SQL, Java, MATLAB.

Systems & Platforms

Linux, Git, GitHub, macOS, MySQL, Windows, Docker, n8n.

Core Concepts

Algorithms and Data Structures, Networking Protocols (IP, TCP), OSI Model.

LANGUAGES

Turkish

Native or bilingual proficiency

English

Full professional proficiency

Italian

Limited working proficiency

CERTIFICATIONS

- Machine Learning for Multiple Domains: From Concepts to Implementation(AutoML)
- Reply Code Challenge
- Mastering Data Structures & Algorithms using C and C++
- Aspire Leaders Program
- McKinsey.org Forward Program
