ALI ARMAN DAI

MSc Data Science & Engineering student | AI, Machine Learning, LLM and RAG applications
Torino, Italy | +39 329 307 2577 | armanalis1905@gmail.com
LinkedIn: linkedin.com/in/ali-arman-dai | GitHub: github.com/armanalis | Portfolio: armanalis.github.io

SUMMARY

MSc Data Science & Engineering student at Politecnico di Torino with working knowledge of Retrieval-Augmented Generation (RAG), embeddings and vector search, plus experience with Large Language Model (LLM) applications, AutoML and Python data pipelines processing 2.2M+ records. Built and deployed two full-stack projects, one with an LLM integrated through the Groq API.

EDUCATION

MSc in Data Science and Engineering - Politecnico di Torino — Sep 2026 - Present
Current courses: Data Science and Machine Learning Lab, Information Theory for Data Science, Computational Linear Algebra for Large-Scale Problems, Data Management and Visualization, Innovation Management

BSc in Computer Engineering - Politecnico di Torino — 2022 - 2026

BSc in Computer Engineering (transferred) - Middle East Technical University (METU) — 2020 - 2022

WORK EXPERIENCE

Data Analyst - Pitti Immagine, Italy (hybrid) — Apr 2026 - Jul 2026

- Built a memory-efficient Python/Streamlit data pipeline that processes 2.2M+ records (1.2 GB) under strict RAM limits.
- Created type-aware validation filters that removed stream-processing bottlenecks and kept data segmentation error-free.
- Engineered a deduplicated behavioral tracking system for accurate analytics and funnel insights.
- Award: Winner - Comitato Leonardo Degree Award 2026 (Premi Leonardo, Italian Quality Committee).

Student Ambassador - Reply, Torino — May 2024 - Present

- Organized and promoted 8+ hackathons, coding challenges and career events at PoliTo, engaging 200+ students.

PROJECTS

Italiarena - italiarena.com | github.com/armanalis/italiarena
Tech: Next.js, TypeScript, Supabase, Groq API (LLM)

- Integrated an LLM (gpt-oss-120b via the Groq API) to explain answers after each match and to pre-check questions sent in by players; open source (MIT).
- Built a live 1v1 Italian trivia game with timed matches, level-based matchmaking (CEFR A1-C1) and bot opponents.
- Designed the real-time match sync on Supabase (Postgres, Realtime, RPCs): server-timed rounds and server-side scoring keep every match fair and cheat-proof.

Semester Planner - semester-planner-five.vercel.app | github.com/armanalis/semester-planner
Tech: React, TypeScript, Vercel, Redis

- Built a weekly study planner for university students: drag-and-drop calendar, course pages with Markdown and LaTeX notes, focus timer and statistics.
- Added cross-device sync (Vercel Functions + Upstash Redis) with QR-code pairing, rate limiting and conflict handling, plus timetable import from a screenshot.

TECHNICAL SKILLS

Programming languages: Python, SQL, TypeScript, C++, C, Java, MATLAB
AI & Machine Learning: LLM APIs (Groq, gpt-oss-120b), Retrieval-Augmented Generation (RAG), embeddings, vector search, AutoML, Machine Learning
Data & databases: PostgreSQL, MySQL, Supabase (Postgres, Auth, Realtime), Redis, Streamlit
Web & cloud: React, Next.js, Vercel, Tailwind CSS
Tools & platforms: Git, GitHub Actions, Docker, n8n, Linux, macOS
Advanced knowledge in: Algorithms & data structures, OOP & SOLID design, networking (TCP/IP, UDP, OSI model)

LANGUAGES

Turkish: Native
English: Full professional
Italian: Limited working

CERTIFICATIONS

- Machine Learning for Multiple Domains: From Concepts to Implementation (AutoML) - Reply Code Challenge
- Mastering Data Structures & Algorithms using C and C++ - Aspire Leaders Program
- McKinsey.org Forward Program
